Chapter 0

Course information

0.1 This course

This is the Spring 2017 Mechanics course studied by 2nd-year undergraduate international students at Kyushu University.

0.1.1 What you need to do

- Borrow the book “Engineering Mechanics: Dynamics”, 6th edition, by Meriam and Kraige from the Kikan-kyoiku office in the centre-zone. The course will be based on that book and you will need to refer to it in class.
- Prepare a challenge-log in the form of a workbook or folder where you can clearly write the calculations you perform to solve each challenge. This will be used in the final assessment and will be occasionally reviewed by the teacher.
- Submit a weekly feedback form by **9am on Monday** before class at <https://goo.gl/forms/2PgFF0eqT0vbK0to2>.
- Please bring a wifi-capable internet device to class, as well as headphones if you need to access online components of the course during class. If you let me know in advance, I can lend computers and provide power extension cables for those who require them (limited number).

0.1.2 How this works

- This booklet forms part of an active-learning segment in the course. The learning is self-directed in contrast to the traditional lecture-style model.
- Learning is guided through solving a series of challenges combined with instant feedback about the correctness of your answer.
- Traditional lectures are replaced by discussion time. Here, you are encouraged to discuss any issues with your peers, teacher and any teaching assistants. You can also learn from explaining concepts to your peers.
- Discussion-time is from 13:00 to 14:30 on Mondays at room W4-766.
- Peer discussion is encouraged, however, if you have help to solve a challenge, always make sure you do understand the details yourself. You will need to be able to do this in an exam environment. The questions on the exam will be similar in nature to the challenges. If you can do all of the challenges, you can get 100% on the exam.
- Every challenge in the book typically contains a **Challenge** with suggested **Resources** which you are recommended to utilise in order to solve the challenge. **Solutions** will be given. Occasionally the teacher will provide extra **Comments** to help guide your thinking.
- For deep understanding, it is recommended to study the suggested resources beyond the minimum required to complete the challenge.
- The challenge document has many pages and is continuously being developed. Therefore it is advised to view the document on an electronic device rather than print it. The date on the front page denotes the version of the document. You will be notified when the document is updated.
- A target challenge will be set each week. This will set the pace of the course and define the examinable material. It's ok if you can't quite reach the target challenge for a given week, but you should be careful not to fall behind, since the date of the exam cannot be delayed.

0.1.3 Assessment

In order to prove to outside parties that you have learned something from the course, we must perform summative assessments. You will receive a weighted score based on:

- Challenge-log (10%) - final state at the end of the course, showing your calculations for all the challenges in the course.
- Mid-term exam (30%)
- Coursework (20%)
- Final exam (40%)

Final score = MAX(Weighted score, Final exam)

0.2 Timetable

	Discussion	Target	Note
1	10 April	-	
2	17 April	1.4	
3	24 April	1.7	
4	8 May	1.12	
5	15 May	1.17	
6	22 May		
7	29 May		
8	5 June		
9	12 June		Mid-term exam
10	19 June		
11	26 June		
12	3 July		
13	10 July		
14	13 July		
15	24 July	-	Final exam

Chapter 1

Kinetics of systems of particles

1.1 System centre-of-mass position, mass and velocity: I

Resources

- Book sections 4/1 to 4/2

Challenge

1. $\bar{\mathbf{r}}$, $\dot{\bar{\mathbf{r}}}$ and $\ddot{\bar{\mathbf{r}}}$ of Question 4/1.
2. Question 4/4

Solution

1. Given in book.
2. 316 N

1.2 System centre-of-mass position, mass and velocity: II

Resources

- Book sections 4/1 to 4/2

Challenge

Question 4/5. Determine the *magnitude* of the acceleration.

Solution

Given in book.

1.3 System centre-of-mass position, mass and velocity: III

Resources

- Book sections 4/1 to 4/2

Challenge

Question 4/13, but change the force to a 10 N force and the mass of each bar to 8 kg.

Solution

0.42 m/s^2

1.4 Kinetic and potential energy

Resources

- Book section 4/3

Challenge

1. Calculate T in question 4/1
2. Question 4/10

Solution

1. Given in book.
2. To check your final answer, substitute $b = 2$ metres into your final answer. You should obtain 5.27 m/s.

1.5 Cross-product

Resources

- <https://www.khanacademy.org/science/physics/magnetic-forces-and-magnetic-fields/electric-motors/v/calculating-dot-and-cross-products-with-unit-vector-notation>

Challenge

1. Determine the angle between the two vectors $\mathbf{a} = [3, 0, 0]$ and $\mathbf{b} = [3, 1, 0]$ and use it to calculate $\mathbf{c} = \mathbf{a} \times \mathbf{b}$. Which direction does the vector \mathbf{c} point?
2. Determine the cross product $\mathbf{f} = \mathbf{d} \times \mathbf{e}$ where $\mathbf{d} = 4\hat{i} + 2\hat{j} + 1\hat{k}$ and $\mathbf{e} = -2\hat{i} - 4\hat{j} + 8\hat{k}$ without calculating the angle between them.

Solution

Please compare your answer with your partner and discuss in class if answers differ.

1.6 Rotation I

Resources

- Book section 4/4

Challenges

Calculate the angular momentum and the rate of change of angular momentum with time for Question 4/1.

Solutions

Given in book.

1.7 Rotation II

Resources

- Book section 4/4

Challenges

Question 4/16

If you have difficulty, consider doing question 4/15 first (optional).

Solutions

The required time should be 2.72 s

1.8 Rotation III

Resources

- Book section 4/4

Challenges

Question 4/2

Solutions

To check your answers substitute $d = 2$ metres, $m = 7$ kg, $v = 3$ m/s and $f = 7$ N into your final answers. You should obtain $\mathbf{H}_G = 432\hat{i} + 144\hat{j} + 168\hat{k}$ kgm²/s and $\dot{\mathbf{H}}_G = -8\hat{i} - 12\hat{j} + 0\hat{k}$ Nm

1.9 Conservation of momentum

Resources

- Book section 4/5

Challenges

1. In Question 4/17, at what point does the vehicle stop accelerating?
2. Solve Question 4/17
3. Question 4/18

Solutions

1. Please write your answer and compare with your partner in class
2. Given in book
3. 0.21 m/s

1.10 Conservation of momentum vs energy

Resources

- Book section 4/5

Challenges

1. Solve Question 4/19
2. Why is energy not conserved here? Where did the energy go? Under what conditions is momentum conserved, and under what conditions is energy conserved?

Solutions

1. Given in book
2. Please write your answers and compare with your partner in class.

1.11 Combined problems I

Resources

- Book section 4/1 to 4/5

Challenge

Solve Question 4/22.

The question states that an impulse is imparted “over a negligibly short period of time” which is a little confusing since impulse is the integration of force over time which becomes zero as time goes to zero. Instead, here you can consider that whatever the time is, the final product of Force and Time is 10 N s .

Solution

4.7 m/s

1.12 Combined problems II

Resources

- Book section 4/1 to 4/5

Challenge

Solve Question 4/28

Solutions

You should obtain an algebraic expression for v and $\dot{\theta}$. To check your expression, you can substitute the following values into the expression: $m_0 = 1 \text{ kg}$, $v_0 = 1000 \text{ m s}^{-1}$, $b = 1.5 \text{ m}$ and $m = 4 \text{ kg}$, whereby you should obtain $v = 111 \text{ m s}^{-1}$ and $\dot{\theta} = 222 \text{ rad s}^{-1}$.

1.13 In-plane flow

Resources

- Book section 4/6

Challenge

Derive equation 4/19 in the book from equation 4/19a.

1.14 Force on vane

Resources

- Book section 4/6

Challenge

Show your working for sample problem 4/5 (a) and (b)

1.15 Power and a vane

Resources

- Book section 4/6

Challenge

Considering sample problem 4/6,

1. Explain in words what is meant by “power by action of the fluid”.
2. The power is defined here by measuring the force applied to move an object at a constant velocity. If force creates acceleration ($F = ma$), how can the velocity be constant?
3. The power is zero for either $F = 0$ or $u = 0$ (arbitrary units). Explain using words the conditions under which these would occur and why this results in no power.
4. Work through and solve the sample problem.

Solutions

Please compare your solutions with your partner. You may be asked to present your solutions to the class.

1.16 Balancing forces: Jet aeroplane example

Resources

- Book section 4/6

Challenge

Work through sample problem 4/8 to obtain the equation of motion of the system.

1.17 Balancing forces: Jet aeroplane

Resources

- Book section 4/6

Challenge

Answer question 4/33.

Solution

Given in book.

1.18 Balancing forces: Fire tug

Resources

- Book section 4/6

Challenge

Answer question 4/37.

Solution

Given in book.
